

Home removal checklist

DISMANTLING FURNITURE READY TO MOVE

If this requires dismantling for moving this will need to be done prior to the move. Pack all the sets of fittings in one box labelled 'bits' so you can locate these quickly when you need to re-assemble them.

ATTICS AND LOFTS

If the attic or loft is not boarded and lit or does not have safe access our crew cannot enter. Any attic or loft items will need to be taken down and placed in another room ready to be moved.

COOKERS / WASHING MACHINES / FRIDGES AND FREEZERS

Fridges and freezers will need to be defrosted in plenty of time to be dried thoroughly before moving. Cookers will need to be disconnected (by approved CORGI agents for gas cookers) and washing machines drained. Washing machines should be secured with the brackets supplied by the manufacturer for transportation.

FIXTURES AND FITTINGS / CURTAINS / BLINDS

Fittings will need to be taken down ready to be packed and moved by the crew. If you'd like our handyman to assist with doing this please let us know.

GARAGES AND SHEDS

Removals companies cannot transport flammable substances (e.g., tins of paint, gas bottles, etc) and therefore request that these items are sorted with rubbish and discarded in advance. Alternatively, you can take these with you personally.

ACCESS / PARKING

We would advise letting your neighbours at both collection and delivery addresses know of your move date if our vehicles are going to cause them any inconvenience. If it is required and you have not asked us to do so on your behalf please ensure any parking arrangements are made in advance.

PACKING

If you have chosen to do your own packing it is important to use the appropriate containers for different items.
